

The ACC PMT's are mounted in an identical housing as the TOF PMT's.

The lightguides however are plastic fibers. The PMT Housing is vented to the fiber side and the venting hole (Fig.1) is blocked by a porous foam ( see ACC Action Item 3 Material List Item # 22 and ACC Action Item # 1 Venting).

For reasons of containment, each group of 4 PMT's is covered hermetically by a box-like cover (Fig.2). These boxes are vented ( see ACC Action Item # 1 Venting).
